Business Problem

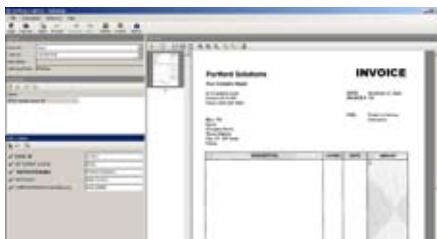

Today, organizations face the challenge of handling business critical data from customers, external business partners, and internal business applications.

Keeping pace with ever changing file formats, data types, and business requirements can result in a collection of micro solutions which often prove difficult to support. This process of managing information delivered via s/FTP, email, websites, and other sources into your document management system can be time inefficient.

Throughout your organizations there is also a need to easily and accurately automate the capture and organization of electronic content from the desktop with seamless integration into Microsoft Office and Windows.

Software Solution

DocuNECT is our feature rich solution which provides seamless capture of any type of file to your EMC document management system.

Powerful Tools

DocuNECT is integrated into the Microsoft Windows desktop (XP or Vista) allowing users to:

- Print documents directly into a document management system from any print enabled application
- Send documents directly to indexing within Microsoft Windows explorer
- Drop Zone to capture and index emails and/or attachments from Microsoft Outlook

In addition to desktop tools, information can also be automatically captured from:

- FTP or Secure FTP Sites
- Email (POP3, IMAP, and MS Exchange)
- Multi-function devices and fax servers
- And more...

DocuNECT has powerful business rules used to index documents captured from the desktop by extracting data from the content of a document, external database or business application.

Maximize Your Investment

DocuNECT is tightly integrated with leading document management systems including EMC's Application-Xtender and D6. DocuNECT will help you realize the full potential of your document management system.
